Energy Management Platform

Wolseley UK

➤ Case study:

Wolseley UK Selects SenseLogix Energy Management Platform for its UK Headquarters to support its journey towards greater sustainability.

Wolseley UK has installed EnergyLogix, the award-winning, real-time energy management platform from SenseLogix, at the company's headquarters in Leamington Spa. The system includes a multi-utility data capture solution that has been extracted from the onsite Building Management System (BMS) and the implementation of a real-time aM&T energy management solution.

➤ Key Facts:

- Real-time energy dashboard
- Gas, water and electric sub metering
- Installation of Modbus network
- Integration into Building Management System
- Energy, cost and financial reporting tool

The system, which utilised existing electrical sub meters and utility meters that were extracted from the BMS, was installed by EWA Controls, with no loss of power or disruption to the site.

Mukesh Aggarwal, Managing Director, EWA, says: "The meters were extracted from the BMS and connected to the EnergyLogix

system, which was preconfigured to Wolseley's requirements, in less than one day. It was incredibly easy to do and will add enormous value to the end client."

The solution provides a real-time dashboard to give Wolseley UK's site facilities team the ability to explore energy consumption through an interactive dashboard to identify areas of high energy consumption, in order to undertake corrective action and monitor improvements to ensure they are cost effective. The system provides full energy, cost and carbon reports that can be scheduled to deliver automatically to key stakeholders in the organisation.

John Page, Site Facilities Manager, Wolseley UK says: "The system is exactly what we were looking for. It allows us to explore our energy use with a simple click of a button without the need for complicated reports. It is very easy to use and can be placed in public spaces so that everyone can see the energy savings in action, which promotes what we are trying to achieve as an organisation."

John continued: "The platform is also extendable allowing additional solutions to be added, such as renewable dashboards and desk power management, as we look to reduce our energy use through the implementation of smart controls and new technology."

"EnergyLogix provides us with a complete energy solution that will enable us to gain greater visibility of our energy use and once we have identified areas for improvement, implement control solutions as part of the same platform."

John Page, Site Facilities Manager,
RLS, Wolseley UK

➤ EnergyLogix provides a host of application-specific energy solutions ranging from aM&T software and renewable dashboards to PC power management and desk power control. For more information on how SenseLogix's products and services can help you reduce your energy consumption contact David Hall, Sales & Marketing Director, on **07775 308700 / 01745 770501**.
